### **Why Technology Is Important Today**

Information technology is important in our lives because "Managing the dynamic issues of a day's work is helpful. Technology provides a number of methods to help the development and information exchange. (digitalclassworld, n.d.)" It is also improving more and more in the future. We just like the easier and fastest way. "The study and use of computers and any type of telecommunications that store, retrieve, study, communicate, process data, and deliver information together create information technology (IT). A combination of hardware and software is employed in information technology to carry out the basic functions that people require and use on a daily. (digitalclassworld, n.d.)" Technology is helping to make our lives easier and faster. So, I believe that technology will be the important technology for us only today but also in the future. The reason why technology is important today because it can help on human responsibilities.

Now, Technology is widely used in business today. "Technology can be used to protect private executive decisions, financial data, and other proprietary information that gives a company an advantage. Simply, technology aids businesses in protecting their ideas from enemies. (Oklahoma SBDC , 2022)" And also, Technology is being used instead of jobs that people have to do as like an automatic coffee machine. Business needs technology and technology can help. "The system, product, and quality of service are improved because of technology." Therefore, technology and business are working together today.

And today, technology is also essential in education. "Students now have a wide range of online resources because of technology, inspiring them to research and develop greater independence. Making things easier to understand, such as through an educational video, also makes learning easier. ( onlinebusinessschool.com, n.d.)" The last things, Technology gives students access to large amounts of online resources, which motivates them to conduct studies and so develop greater independence. I believe that as technology advances in the future, so will improve also education.

In short, "Technology does have an effect on how individuals communicate, learn, and think. It helps society and affects how people connect to one another on a daily basis. Today's world is greatly shaped by technology. It affects people's daily lives and has both positive and negative effects on the world. (bctv, n.d.)"
